

ASSTOR Reinstwassertechnik

ASSTOR ultrapure water technology

One of Germany's leading
High-Tech & High-Knowledge Companies in
the area of
water treatment technology

Mai 2012

ASSTOR Reinstwassertechnik

Competence in

- Water Treatment
- Hygiene Solutions
- Feed Systems
- Consulting

Our Philosophy

We orientate ourselves with our action exclusively by the quality of the generated drinking water.

Our pattern

„ An infection danger may go out in no more case from the drinking water“

Robert Koch,
Nobel prize laureate, Medical scientist and Microbiologist

About ASSTOR Reinstwassertechnik

Today's enterprise "ASSTOR Reinstwassertechnik e.K." was founded in 2007 by Udo Wenske by a company takeover. Already at the predecessor's enterprise he acted in leading position.

Their activities the "ASSTOR Reinstwassertechnik" bundles up in 4 business segments

- 1 - Water Treatment
- 2 - Hygiene Solutions
- 3 - Feed Systems
- 4 - Consulting

Business segment 1 - water treatment

In the business segment water treatment we make available to our commercial and private principals technologies and know-how with which drinking water is cleaned by **chemical pollutions** using **separation technologies** and **absorption methods**.

With the **HYGMOSE** technology we are exclusively in possession of an advancement of the proven **reverse osmosis technology** with which drinking water can be also produced for private users in the highest purity, for the first time drinking water even is free of allergen.

Business segment 2 – Hygiene Solutions

In the business segment hygiene solutions products and solutions are developed to neutralise or to kill **infection-endangering pollutions** in the water with the help of **chemical detergents**.

Beside products we purchase from famous manufacturers worldwide here comes our own development **OXOSANUM-Chlordioxid** into application. This is a highly efficient, ready for application concentrate for disinfection that can be need-wise equipped with different specific product features.

Business segment 3 – Feed Systems

For optimum solutions the technologies of water treatment and the application of chemical products are tuned on each other and their application is processed using **individual and specific feed systems**.

We develop these sensitive and **complex measuring and control systems** and we construct, build, implement and wait them.

Business segment 4 - Consulting

We understand the business segment Consulting as a comprehensive partnership for development, going beyond subjects and hierarchies.

Our specialists develop **new products, services and solutions**, together with manufacturers, university research enterprises, charitable organisations and the users.

We are working

As an enterprise for development, consulting and services we offer to our principals mature standard products and adaptable individual solutions.

As a rule we develop products or services up to the marketability and then we award a licence to the utilisation to a partner.

We develop innovative individual solutions preferably in close collaboration with our principals. We are very much appreciated just then as a partner if at the beginning of a project no specific approach for solution is already recognizable.

Who we are: Udo Wenske

- Founder, owner and director, responsible for R&D
- 1985 studies in technical working sciences at TU Berlin
- 1988 First experiences with projects on „ultra pure water“
- Some years of practice as key-account manager in computer software industry
- Combined chemical and microbiological cleaning of drinking water
- Certified sample taker for drinking and swimming pool water

Who we are: Peter M. Scholz

- director, responsible for marketing & sales
- 1982 Studies in communication sciences
- Budget- und creative director in national design companies and advertising agencies
- 1992 self employed business man
- External project management
- Consultant for strategical communication
- Certified sample taker for drinking and swimming pool water

Our partners

We are linked in intense partnership with

- **UMG – Universitätsmedizin Göttingen**
Dept. for Medical Microbiology
for R&D, control and training
- **Dr. Schumacher GmbH**
for production and sales of licenced products

UNIVERSITÄTSMEDIZIN : **UMG**
GÖTTINGEN

PPP - Public Private Partnership

We support the parish Saint Audomar of the Catholic churches in the diocese Cologne and the priest Elix Normil born in Haiti with construction of a school in Port-au-Prince.

In autumn 2011, the Première lady of Haiti, Sophia Martelly explained, that she will support the project.

PPP - Public Private Partnership

ASSTOR Reinstwassertechnik will "improve" the drinking water of the school so that no more pathogenic germs are contained. We win financial supporters, develop the hygiene concept and will install the technology in autumn 2012.

Our competences in a nutshell

ASSTOR Reinstwassertechnik

WATER TREATMENT

Filtration devices for private and industrial application

HYGIENE SOLUTIONS

Desinfectant with the product families OXOSANUM and LOG 6

FEED SYSTEMS

Preparation units
Feed systems
Measuring and regulation techn.

CONSULTING

Consulting
Conception
Analysis
Training

We are looking forward
to launch common projects
with you!

Innovationen für
Menschen
